

Care Instructions

No Dry Cleaning

Do not dry clean printed garments, we use a solvent based ink and the dry cleaners use a solvent based cleaner which will remove or smudge the print and will weaken the adhesion of the rubber to the garment.

Cold wash only, do not wash in hot water

Gentle warm iron only on the inside; be careful not to use too much heat, as this will damage the print.

Generally speaking a Digitex Rubber Transfers on a normal cotton t-shirt only washed in cold water and never ironed should last longer than the garment in most cases.
